Bill of Materials

List other parts

- 1 × 25mm NFC sticker per cartridge x 1:

Description

This model is a modified version of the amazing original by **The Stock Pot**. Watch his tutorial [here!](#)

The model has an inset for (sticker) labels with a size of **60x90mm**, with a **4mm** corner radius. *Tip:* The corners can be cut with a 4mm corner punch.

Because of the inset, supports are required. They should peel away pretty easily, straight from the build plate.

The bottom case is also slightly modified to make it close a bit more easily.

Boost Me (for free)

How to create the labels

1. Design the 60x90mm labels in your favourite design software (I used [Sketch](#)).
2. Print them on glossy sticker paper ([example](#)).
3. Add a layer of transparent book cover foil as scratch protection ([example](#)).
4. Cut the labels to size (60x90mm).
5. Optionally use a 4mm corner punch ([example](#)) to cut the radius of the corners perfectly. You can also cut them by hand.

Great model thanks! Printed a bunch to play music on our stereo system.

Also I have designed a box to hold the cartridges that you can flip through :)

Love it. Inset is such a nice touch! Could you provide a STEP? I'm not cool enough to own a printer capable of multi-color so I can better isolate the arrow on the top. 😊

Unfortunately I don't have a STEP file, but you should be able to download the separate STL files and go from there. 😊

Hey! First time 3D printer here and printing supports kind of made the whole thing super stringy and the supports did not tear away. Following all the rules (cleaning build plate like the manual says to do, lubing the rails, using brand new filament and putting it with a desiccator when not in use) but the problem just might be the type of supports I'm using. What type of support/settings should I use to print this adequately?
